D-MATRIX

Satellite headend, digital matrix

D-matrix, the new compact and flexible headend made by Fracarro to distribute SD and HD digital contents (both encrypted and free to air) over a medium sized installation.

USB Info Channel

Thanks to the multifunctional USB port, videos (TS format) stored on a USB memory stick can be played.

MUX ad Hoc

Create a mux with the chosen programs from up to 4 Satellite transponders and manage all the descriptor parameters.

Output MUX 1 Output MUX 2

Auto Remapping function

You can change a program in real time within the mux without the need to retune all the TV sets in the system.

Web based interface

The headend can be remotely programmed anytime or anywhere (PC and mobile).

FPGA Technology

FPGA Technology enables a flexible and efficient way of upgrading a system, using the latest state of the art technology.

ARP 2.0

Assign a priority level to each program to guarantee continuity of service when a bit rate overflow occurs. All the programs will be sequentially restored when the global bit rate returns within the system limits.
